

EXERCISE-1 Creating and Managing Tables

OBJECTIVE

After the completion of this exercise, students should be able to do the following:

- Create tables
- Describing the data types that can be used when specifying column definition
- Alter table definitions
- Drop, rename, and truncate tables

NAMING RULES

Table names and column names:

- Must begin with a letter
- Must be 1-30 characters long
- Must contain only A-Z, a-z, 0-9, _, \$, and #
- Must not duplicate the name of another object owned by the same user
- Must not be an oracle server reserve words
- 2 different tables should not have same name.
- Should specify a unique column name.
- Should specify proper data type along with width
- Can include "not null" condition when needed. By default it is 'null'.

The CREATE TABLE Statement

Table: Basic unit of storage; composed of rows and columns

Syntax: 1 Create table table_name (column_name1 data_type (size)
column_name2 data_type (size)...);

Syntax: 2 Create table table_name (column_name1 data_type (size) constraints,
column_name2 data_type constraints ...);

Example:

```
Create table employees ( employee_id number(6), first_name varchar2(20), ..job_id varchar2(10),
CONSTRAINT emp_emp_id_pk PRIMARY KEY (employee_id));
```

Tables Used in this course

Creating a table by using a Sub query

SYNTAX

```
// CREATE TABLE table_name(column_name type(size)...);
```

```
Create table table_name as select column_name1,column_name2,.....column_namen from
table_name where predicate;
```

AS Subquery

Highest_sal		Number
-------------	--	--------

LOCATION TABLE

NAME	NULL?	TYPE
Location_id	Not null	Number(4)
St_addr		Varchar(40)
Postal_code		Varchar(12)
City	Not null	Varchar(30)
State_province		Varchar(25)
Country_id		Char(2)

1. Create the DEPT table based on the DEPARTMENT following the table instance chart below. Confirm that the table is created.

Column name	ID	NAME
Key Type		
Nulls/Unique		
FK table		
FK column		
Data Type	Number	Varchar2
Length	7	25

```
Create table DEPT ( ID integer, name varchar(25));
```

2. Create the EMP table based on the following instance chart. Confirm that the table is created.

Column name	ID	LAST_NAME	FIRST_NAME	DEPT_ID
Key Type				
Nulls/Unique				
FK table				
FK column				
Data Type	Number	Varchar2	Varchar2	Number
Length	7	25	25	7

```
Create table emp ( ID integer, first-name varchar (25),  
last-name varchar (25), dept-ID integer);
```

3. Modify the EMP table to allow for longer employee last names. Confirm the modification.(Hint: Increase the size to 50)

```
alter table emp modify last-name varchar(50);
```

4. Create the EMPLOYEES2 table based on the structure of EMPLOYEES table. Include Only the Employee_id, First_name, Last_name, Salary and Dept_id coloumns. Name the columns Id, First_name, Last_name, salary and Dept_id respectively.

```
Create table employees (employee_id integer,  
first_name varchar(25), last_name varchar(25),  
salary integer, dept_ID integer);
```

5. Drop the EMP table.

```
drop table emp;
```

6. Rename the EMPLOYEES2 table as EMP.

```
Alter table employees rename to emp;
```

7. Add a comment on DEPT and EMP tables. Confirm the modification by describing the table.

```
Alter table dept comment = 'Department details';  
Alter table emp comment = 'Employee details';
```

8. Drop the First_name column from the EMP table and confirm it.

```
Alter table dept comment = 'Employee details';  
Alter table emp drop first-name;
```

Evaluation Procedure	Marks awarded
Query(5)	5
Execution (5)	5
